At the core of Capisol is a secure cloud based document management system that provides easy, efficient digitalisation to handle all your document requirements and enables you to empower employees, engage customers and optimise business processes!

Integrated directly, seamlessly and securely into your accounting system, Capisol auto-generates all your financial documents directly from your ERP system and archives these in the cloud. Scan supporting documents from anywhere direct to the cloud where Capisol will auto-split the batches and efficiently link each document to the relevant invoice.

All documents are stored directly and securely in the cloud, allowing scanned and linked docs to be accessed from anywhere. All documents are distributed securely to vendors from Capisol, with the ability to click directly on a document to access the necessary invoice, POD or supporting document, resulting in less queries and faster payments.

With this solution, your office becomes completely paperless and compliant with tax and storage regulations while adopting best practice for data protection.

SCAN

Cloud based scanning engine

Scan from any location

Batch scanning
